
why: $R(\sigma)$, the claims a sentence rests on (identifiers written by M_J, checked against C). **where**: $\beta(E^+(c))$, the exact source, character range and page, reproduced by the system.
Binding state of a sentence: **bound** (all linked Claims resolve) · **mixed** · **unbound** · **no_claim**. Optional warning layer (Sect. 4.6): each bound claim may also carry $\mathrm{w}(c) \in$ supported / not_supported / unassessed; it is displayed, never used to filter, never sent to a model.
